

TECHNICAL COMMUNICATIONS PORTFOLIO

NED PAJIC

Developer Advocate • Technical Communicator • Technical Evangelist

This portfolio represents a small selection of technical education, product demonstrations, webinars, documentation, release communications, and customer enablement content created throughout more than 17 years in enterprise software.

The examples included here were intentionally selected to demonstrate the breadth of my work rather than serve as a comprehensive collection. Together, they represent only a small sample of hundreds of technical videos, webinars, knowledge base articles, product releases, and educational resources produced throughout my career.

Technical Writing & Release Communications

Selected writing samples demonstrating product messaging, structured technical documentation, release communication, and customer-focused clarity.

CASPIO 72.0 RELEASE NOTES

Introducing the AI Assistant (Beta)

The AI Assistant Beta expands Caspio's focus on AI-driven app development across the platform. Users can build and manage a Flex application by describing it in plain language, turning configuration across multiple screens into a guided conversation. The release notes then organize enhancements across Flex, Vault, webhooks.

- AI Assistant and Flex enhancements
- Vault and compliance updates
- Outgoing webhook improvements
- Extensions and model updates
- Structured bug-fix table

A Small Sample of a Much Larger Body of Work

The examples in this portfolio are the tip of the iceberg.

Across more than a decade in technical education and product communication, I have created hundreds of tutorials, webinars, release videos, customer stories, product announcements, knowledge base articles, application demos, online courses, and short-form educational videos. The work selected here is intended to show range, not volume.
